EDUCATION

Grambling State University – Grambling, LA

Graduating May 2028

BSc. Computer Science & Cybersecurity

- **Relevant coursework:** Computer Science I & II, Data Structures and Algorithms, Discrete Structures, Intro to AI & AI Engineering, Foundations of Deep Learning, Programming Language Concepts, Computer Architecture, Database Management Systems
- **Achievements:** National Olympiad Medalist, Academic Achievement Scholarship (full ride), President's List

EXPERIENCE

Solera Holdings LLC - *Software Engineering Intern* | Westlake, TX

May 2026 – Aug 2026

- Built and deployed two approval-triggered pipelines: one running end-to-end AI fixes on customer feedback on target repo, cutting engineering hours **50%+**; another auto-generating release documentation per release, saving **500+** engineering hours/month
- Architected the pipeline's AI verification core: a read-only fault localizer, a framework-aware xUnit/Jest proof gate requiring a failing test before any fix, and a five-part independent verifier, plus a lease-based state machine, deployed end-to-end
- Owned an Excel/Open XML engine (writer, validator, sanitizer, manifest service, CLI tool), validated against a 60-image regression suite

Praecept - *Software Engineer* | Remote, US

Mar 2026 – May 2026

- Engineered a Node.js CLI orchestrating a multi-stage data pipeline that integrates LLM extraction, external APIs (CourtListener), and asynchronous task routing into a structured review workflow
- Architected a production authentication system, migrating custom JWT to Supabase Auth with backend-proxied HttpOnly sessions, OAuth (PKCE) flows, JWKS verification, token revocation, and Cloudflare-aware rate limiting

Grambling State University - *Software Engineering Intern* | Grambling, LA

Jan 2025 – Apr 2025

- Implemented Passport.js auth and RESTful PostgreSQL APIs for an eye clinic platform, integrating Mailjet/MessageBird notifications

PROJECTS

SafeLink – Offline Disaster Alert System | *Team of 5*

github.com/BE-Hackathon-2025/SafeLink

- Built an AI-powered disaster alert system using a Bluetooth mesh network to deliver life-saving alerts offline
- Engineered a distributed FastAPI backend for real-time event ingestion (GDACS), IP geolocation, dynamic risk scoring, and tiered alert dispatch, reducing notification latency **70%**

Cascade Operator – Cross-Mesh Cascade Failure Auto-Remediation

github.com/gasthecreator/Cascade-Operator

- Built a mesh-agnostic Kubernetes operator in Go detecting three cascade failure signatures (latency/error cascade, retry storms, fan-out amplification) across Istio and Linkerd, patching the right mesh primitive and ramping a stepwise restore
- Ran a k6-driven resilience benchmark comparing detect-only versus mitigated runs on a live cluster, cutting fan-out amplification's blast radius from **63.2% to 31.8%** error rate and latency/error cascade's from **8.6% to 3.3%**
- Verified reconciler correctness with property-based testing (rapid) fuzzing random event sequences against invariants like restore-step monotonicity and orphan-free signature handoffs, corroborated by optional eBPF kernel-level TCP-reset signals via Tetragon

Pharos - Multi-Region Adverse-Event Ingestion Pipeline

github.com/gasthecreator/pharos

- Built a distributed adverse-event ingestion pipeline solving four hard distributed-systems problems: network-partition tolerance, exactly-once delivery, per-site rate limiting with dead-letter handling, and multi-timezone event ordering
- Verified all four guarantees with fault-injection tests against real Cassandra and Kafka, not mocks, covering total network partitions, asymmetric partition healing, and out-of-order delivery, catching five real correctness bugs via design review before they shipped
- Deployed a multi-datacenter Cassandra and dual-Kafka cluster with MirrorMaker 2 replication, load-tested to a **101ms p95** with confirmed per-site rate-limit isolation, and shipped signed container images with SBOM and SLSA provenance attached

SKILLS

- **Programming Languages:** Python, TypeScript, Go, C#, JavaScript, Java, SQL
- **AI Agents & LLMs:** Cursor, Claude, GitHub Copilot, Gemini, OpenAI Codex, MCP workflows
- **Tools & Frameworks:** Node.js, ASP.NET Core, FastAPI, Express.js, Kafka, Cassandra, MongoDB, PostgreSQL, Supabase, ReactJS, React Native, Vite, Kubernetes, Docker, controller-runtime/Kubebuilder, Prometheus, Cloudflare, Server-Sent Events, GoogleOAuth, Jest
- **Certifications:** AWS Cloud Foundations, IBM (AI, Cybersecurity, Data), PwC Extern

LEADERSHIP & AFFILIATIONS

Additional Involvements: BE Smart Hackathon (Top 5 of 64 Teams), eBay Software Engineer Fellow(Pathways), Break Through Tech (Cornell Tech), EY Expedition, Computing Talent Initiative, AI4ALL, CodePath, Eli Lilly Discovery Day Fellow, Amazon AI/ML Symposium & Prep Series, ColorStack, Vassar College Burnam Fellowship Volunteer, NSBE, New Seasons Youth Program, NaijaCoder
