Education

Grambling State University — Grambling, LA
B.S. in Computer Science — *Graduating May 2028*

- **Relevant Coursework:** CS I/II, Data Structures & Algorithms, Discrete Structures, Intro to AI, AI Engineering, Deep Learning, Programming Languages, Computer Architecture, Database Systems
- **Achievements:** National Olympiad Medalist; Academic Achievement Scholarship (full ride); President's List

Technical Skills

Languages: Python, TypeScript, Go, Rust, C/C++, C#, Java, JavaScript, SQL, Solidity, Swift, Kotlin
Technologies: FastAPI, Node.js, Express.js, ASP.NET Core, React Native, PostgreSQL, SQLite, Supabase, Redis, Kubernetes, Docker, Kafka, Cassandra, Prometheus, OpenTelemetry, ONNX Runtime, Foundry, Alloy
AI/ML: PyTorch, scikit-learn, XGBoost, JAX, NumPyro/NUTS, neural posterior estimation, censor-aware evaluation
Agentic Tools: LLM agents, MCP, Claude, Cursor, GitHub Copilot, Gemini, Antigravity, OpenAI Codex
Certifications: AWS Cloud Foundations; IBM (AI, Cybersecurity, Data); PwC Extern

Experience

Solera Holdings LLC — Westlake, TX
Software Engineering Intern — *May 2026 – Aug. 2026*

- Engineered two automation workflows: an approval-triggered AI feedback pilot that generated **127** fix PRs and **300+** issues for one target repo; CAB tooling converted release screenshots into validated Excel checklists.
- Blocked unproven AI fixes with read-only localization, xUnit/Jest failing-test gates, and a **five-part** RED-to-GREEN verifier; built an Open XML exporter validated against **60** regression images and opened cleanly in Excel.

Praecept — Remote, US
Software Engineer — *Mar. 2026 – May 2026*

- Implemented a Node.js CLI integrating LLM extraction, CourtListener APIs, and asynchronous task handling to accelerate case research by an estimated **50%+** and prepare findings for structured human review.
- Hardened authentication by replacing custom JWT with Supabase Auth; added backend-proxied HttpOnly sessions, Google OAuth (PKCE), JWKS verification, token revocation, and Cloudflare-aware rate limiting.

Black Enterprise — Charlotte, NC
Software Engineering Student — *November 2025*

- Built SafeLink, a React Native emergency app with native BLE modules in Swift/Kotlin, enabling phone-to-phone road-closure relaying and offline rerouting — placing Top **5** out of **64** teams at the BE Smart Hackathon.
- Engineered offline A* routing on typed-array OSM graphs with spatial-grid closure masking, validating correctness by matching independent Dijkstra travel-time benchmarks within **1 second** across **40** seeded trips per mode.

Projects

Cascade Operator | *Go, Kubernetes, Istio, Linkerd, k6, Tetragon* — GitHub

- Built a mesh-agnostic Go Kubernetes operator that detects and mitigates latency/error cascades, retry storms, and fan-out amplification across Istio and Linkerd, automatically patching mesh primitives and restoring traffic stepwise.
- Validated mitigation via live k6 load tests, cutting fan-out errors from **63.2% to 31.8%** and latency/error cascades from **8.6% to 3.3%**; confirmed TCP resets with Tetragon eBPF and recovery invariants with property-based tests.

TierFS | *C/C++17, FUSE-T, Swift/AppKit, OpenSSL 3, Bonjour (mDNS/DNS-SD)* — GitHub

- Built TierFS, a C/C++17 FUSE-T macOS storage prototype enabling tiered offload with **1 MiB** chunks, on-demand hydration, AES-256-GCM encryption, X25519/AES-GCM device sessions, and SQLite WAL crash recovery.
- Ported the C++ device server to Android via JNI/NDK; added a boot-restarting foreground service, API **34** emulator/Linux tests, and CI across **three** Android ABIs, enabling Android devices to serve as TierFS storage peers.

Vigil | *Python, PyTorch, JAX, NumPyro/NUTS, PyMC/PyTensor, scikit-learn, XGBoost* — GitHub

- Trained PyTorch amortized and neural-posterior estimators on **20,000 synthetic simulations per seed** to estimate tumor-doubling time and CA 15-3 kinetics; evaluated parameter recovery and posterior calibration.
- Implemented censor-aware ML evaluation with leakage canaries and patient-cluster bootstrap; benchmarked models across **15,000 synthetic patients** and **3 generators**, with XGBoost reaching **0.791 IPCW AUC** on G3.
